

# Instant Adjustment!

## Choose from 256 settings – without unbolting your VariShocks!

During five years of intense research and development, Chris Alston's engineering team successfully corrected every shortcoming of conventional racing shocks. Designed from a clean sheet of paper, VariShock's QuickSet 2 is the first affordable coil-over to combine sophisticated shock valving with all-new, American-made components. Never before have so much performance, repeatability and adjustability been offered at such an affordable price.

VariShock's double-adjustable design is also easier to tune: 256 different settings are attainable simply by rotating two fully-accessible, 16-position knobs. All adjustments are made in seconds, without removing or

► Each 16-position adjuster knob and the billet-aluminum shock body are laser-etched with directional arrows for easy reference.

unbolting the VariShock. One knob sets the compression range; the other sets extension. Both knobs are laser-etched with directional arrows and "plus/minus" symbols that clearly indicate which direction achieves the desired adjustment. Additional arrows etched into the QuickSet 2's base reveal which knob sets extension, and which sets compression.

Repeatability is unprecedented! By controlling the quality of the components, assembling them in-house, and dyno-testing every assembly, Chris Alston's Chassisworks can deliver a pair of VariShocks that perform virtually identically – throughout the entire range of travel. Whereas other brands in this price range rely on

► Unprecedented clearance around the bearing eyes is one benefit of a shorter shock body. Spherical bearings are 1/2"D x 1-1/8"W.

cheaper offshore or OEM parts, American-made VariShocks are engineered systems of premium components, all designed to meet your specific needs.

A revolutionary adjustment mechanism, smaller than any previous design, allows our billet-aluminum body to be both shorter and lighter. You get more clearance around the eyes, plus greater travel within any shock length. Two styles of eye mount are available. Building a specific base for spherical bearings let us create extra clearance around the bearing eyes. Spherical bearings feature COM-8-Teflon-lined, 1-1/8"-wide, high-misalignment ends for 1/2" bolts.

► Urethane bushings (1/2"D x 1-1/4"W) feature up to 350% more material, improving load distribution and extending bushing life.

► An Allen wrench is all that's needed to quickly unlock and adjust VariShock's one-piece lower spring seat.

The urethane end has up to 350% more urethane material than other brands, for superior load distribution, yet no less clearance around the eye. Urethane ends are 1-1/4" wide and accept 1/2" bolts.

A new-design, one-piece lower seat does not require a lock nut; it's locked in place by two ball locks that press into the grooves on the reservoir body and easily unlock for adjustment (with an Allen wrench). Spring seats accept 2-1/2"-ID coil springs. Also available is an exclusive spanner wrench, incorporating four tangs, which will not slip off the lower spring seat because it engages the seat in four places (not one, like common spanners). QuickSet 2 and single-adjustable QuickSet 1 coil-overs are in stock for immediate delivery, in six popular travels: 2-3/4"; 3-1/2"; 4-1/4"; 5-1/8"; 6-1/8"; 7-1/8".

► **Order Today!** VariShock's double-adjustable QuickSet 2 is priced lower than any shock delivering comparable performance: only **\$648** a pair.

(Springs as low as **\$50** a set, when ordered with shocks.) To place your order, please call

Chris Alston's Chassisworks. For additional illustrations and technical details, visit [www.cachassisworks.com](http://www.cachassisworks.com).

**Also available:**  
Single-adjustable  
QuickSet 1 coil-over!  
(One knob sets compression  
& extension together.)  
Only \$374 pr.
